

# *DREAMVERSE*

**The emergent world in a virtual world**

## The Introduction

Since the earliest times, we have been in the process of constant exploration and pursuit. From the primitive clan to the current information society, our ultimate goal has always been to pursue the happiness and beauty of mankind.

Countless prophets and warriors, some looking up at the starry sky, some bowing their heads and pondering deeply, have led us to achieve achievements that can go down in history in their beautiful vision of understanding and transforming the world. The roar of Watt's improved steam engine still lingers in our ears, Faraday's smiling face when he discovered the electromagnetic induction phenomenon is still there, and scientists' nervousness and excitement when facing the first computer are not far away ... All these are not only displayed in museums, but also always in our memory. Nowadays, the first three industrial (scientific and technological) revolutions have come to a new crossroads, and the fourth scientific and technological revolution has approached the gate of the times-metaverse.

### I. The important role played by metaverse

Metaverse is a world completely parallel to the world we live in. If we have to call the world we live in a real world, we can call it a virtual world for the time being. In fact, we will find that they are completely parallel and interactive, meet people's higher material and spiritual pursuits together, and are a surreal world that can be

realized in the future according to the wishes of all participants.

Metaverse is not limited to socializing, but infinite. If it is not necessary to find its boundaries, it is the limit of human imagination. That is to say, as long as human beings are endless, metaverse will never end.

Everyone is unique. Here, regardless of color, race, belief and nationality, everyone is treated equally, and a unique sense of identity is an important feature. Here, the rules are shared through consultation and are based on blockchain technology. Once the rules are set, they are "rules of God", and no one can modify them. Your achievement depends entirely on the growth of your personal role.

Here, personal information will be fully protected and respected, and security is metaverse's fund password. Even developers of an ecosystem have no right to change the rules because they are based on blockchain technology and encrypted digital cash technology. No one can violate other people's information beyond all rules, whether it is property or account information. Here, everyone is the protagonist, and everyone is the God in his own territory. In personal land, people can build various scenes according to their own wishes, and every creation will form a new NFT. Of course, people can cooperate with each other and participate in other people's ideas and scenes. People are no longer passive recipients, but practical creators and designers. In a word, all actions are what you think, and all thoughts are what you want.

## II. Dreamverse business model

Dreamverse is a virtual world that restores many stars, top IP worlds such as movies, animation and games and the real world with high fidelity and refinement. Dreamverse is committed to creating a metaverse with high fidelity, refinement, strong visual impact and immersive experience. Users can sell, build, share, participate and interact with others in metaverse, and experience social entertainment while creating their own unique NFT content.

The goal of Dreamverse is to make metaverse more "real", so many scenes and elements in the real world will be restored in Dreamverse with high fidelity, in order to allow users get the same sense of existence and experience as in reality. All participants will immerse themselves in it and create a new world together.

## **1. Land**

Dreamverse maintains the land in the virtual world through Ethereum smart contracts. We call these irreplaceable digital assets "land", and each land has a unique (x, y) coordinate. The land in each scene can also be purchased with empty land to create any content you want to create, and the land can be sold for resale or lease.

We do not limit the amount of land that users buy. Users can buy one or more pieces of land separately, and many pieces of land can be combined into real estate next to each other, or they can exist independently.

## **2. NFT Mall**

Dreamverse, based on blockchain technology, casts a large number of popular IPs such as movies, animation and games in real life into NFT, which is sold in

Metaverse Mall. Once a user buys these NFTs through DV, they become the user's exclusive asset to interact with metaverse in various ways.

Mall enables users to manage and exchange land assets, prop assets and other assets. In addition to NFT assets of IP items, the mall will also sell customized NFT such as characters, clothing and artworks, which will provide users with various attributes and capabilities to complete creative exploration according to their goals and directions.

With the help of blockchain technology, every NFT asset in Dreamverse ecosystem can be purchased through DV, so that holders can trade, sell or give away. Users are the permanent owners of their digital assets, and can monetize and freely trade assets.

### **3. Creation**

Users can create anything in the land by purchasing the NFT needed to build it. Different from traditional centralized projects, in Dreamverse, the ownership of everything created by users belongs to users themselves, and the property can be confirmed and sacred. Whether we create things in metaverse, play games or carry out other activities, everything we spend our wisdom and time creating can be identified as a unique NFT through blockchain technology, and can be reused and traded through DV. More importantly, property in metaverse and real-world property are convertible.

### III. Dreamverse ecosystem

Dreamverse's whole ecosystem will focus on IP + stars as a breakthrough in the early stage, and realize the presentation of the whole ecology through artificial intelligence AI technology. The perfect combination of artificial intelligence and IP makes it possible to interact with Aidou at any time, and we will witness and promote the birth of a new entertainment industry.

In terms of IP, Dreamverse, with rich entertainment resources and years of management and operation experience, casts a large number of popular IP such as movies, animation and games into NFT, and empowers metaverse according to different attributes. For example, pop songs in the real world can be used as background music in each land. When users set foot on different lands, they will hear different music. In addition to music NFT, Dreamverse will also turn the signed film and television IPs into theme scenes with different styles and characteristics, and create virtual images of characters in IP; Create exclusive manors for celebrities from all walks of life who have signed; Set up master exhibition halls and art galleries to collect and display the works and artworks of various masters.

In terms of stars, Dreamverse will combine many brokerage companies and famous artists at home and abroad to map and reproduce stars in the real world in metaverse. They can hold fan meetings, online concerts, movie premieres and other activities in metaverse. At the same time, with the blessing of AI technology, users can interact and communicate with these real "stars" and "idols" in metaverse, and even go shopping and watch movies with them. . . These things that can't be realized

in the real world can come true in Dreamverse ecology.

In the future, Dreamverse will also create a native digital idol. Like real stars, it will have its own works, fans, concerts, events, commercial endorsements and so on. Even when the time is ripe, they will participate in real-world film and television works.

In the metaverse ecology of Dreamverse, it will become a reality to be neighbors with your favorite idol, travel with friends, face-to-face communication, and listen to concerts at any time.

At present, Dreamverse has reached strategic cooperation with well-known institutions such as the United States, South Korea, Thailand and Singapore to jointly promote the development of Metaverse.

The vision of Dreamverse's whole ecosystem is to take IP + entertainment as the breakthrough point and use the blessing of artificial intelligence to open up more imagination space for Metaverse. In the future, with the co-construction of the community and the continuous improvement of the economic system, Dreamverse will continue to expand the fields of social interaction, games, education, e-commerce, etc., and create a surreal virtual world that restores the real world.

## **IV. Dreamverse Roadmap**

We are committed to making everyone who chooses Dreamverse can build games or other scenes on the land according to their own wishes and imagination,

and have their own economic system. Our task is to develop simple and easy-to-operate programs, open up operation authority, and guarantee and serve participants' ideals: First, provide basic parameters, and participants can freely adjust parameters, equipment and equipment according to their interests, so as to build a rich game ecology that meets their wishes. The second is to allow participants to set their own basic parameters, create their own kingdom from 0, satisfy people's interests and imagination to the maximum extent, and build a unique ecosystem.

## **1. One-year plan**

### **November-December 2021.11-12**

Client version 1.0 was officially launched;

All kinds of avatars NFT transform into different scenes to experience;

Social functions are launched to realize one-to-one and one-to-many smooth communication and interaction among users;

### **2022.01 - 03**

Change your face to generate your own exclusive avatar;

Generate personal warehouse;

Create multiple IP scenarios based on top-level video IP resources; Experience online concerts, press conferences, special effects show;

### **2022.04 - 06**

Create virtual characters and props;

NFT transactions can be carried out, including buildings, characters and props;

The overall NFT is placed and built on its own land; Realize the sale and lease of land between users; Realize transactions between users in the scene;

**2022.07-09**

Official establishment of Shang Yan venues;

Organize and hold online concerts, online premieres and other activities;

The whole system is completed;

Players can get creation tools to complete fine construction on their own land;

**2022.09-12**

The official game battle system is completed;

Players can freely create their own games on their own land;

Realize the virtualization of more real-world scenes;

**2. Five-year plan**

In the next 5 years and beyond, our ultimate goal is not only to provide products, but to achieve a more natural and smooth interaction between people, and a more convenient and enjoyable life. In other words, we will strive to build a comprehensive meta-universe ecosystem. Social, shopping, games, work, education, etc. can all be done here, and all aspects of life will be included. For example, the realistic experience will subvert the e-commerce industry, combining the experience of physical stores with the convenience of e-commerce. People can customize and choose their favorites in the metaverse shopping system. The metaverse will become a way of life, which requires the participation of everyone. We provide platforms or tools, but the real owner is everyone. We look forward to

your joining to create a new future together.

## V. Dreamverse economic model

Dream is the native token of Dreamverse platform. As a platform agreement token, Dream is an important factor to encourage the normal operation of Dreamverse system, and it is also a certificate for land and NFT transactions, payment of platform transaction fees, liquidity improvement, regular rewards and participation in governance.

### Token Issuance and Distribution

Token Name: Dreamverse

Token Code: DV

Network: Ethereum (ETH)

Protocol: ERC20

Accuracy: 18

Contract Address 0xd749889f1b883b6b7f9ddb17a05ef5fed9b7c09

Total token supply (100%): 2,100,000,000

Token Dispensing	Number of tokens	Proportion in total (%)	Token detailed unlocking rules	Proportion of initial circulation of the sub formula
Technology research and development	630 million	30%	Three months after the launch, it will be unlocked linearly in three years	0
Private placement	105 million	5%	20% will be unlocked in the previous month, the rest will be unlocked in 6 months, 15% in the first 5 months and 5% in the last month. It has been communicated that it will be uniformly managed by the project party in the early stage	1%
marketing management	105 million	5%	Locked status, released according to marketing needs	0
IP cooperation	315 million	15%	Release according to IP promotion needs	1.27%
Ecological reward	945 million	45%	Locked state, released according to the needs of ecological docking	0.71%
<b>总计 :</b>	2 billion 100 million	100%		

## Application Scenario

[Buy NFT and other assets] Support the direct purchase of various NFT assets generated by the platform using DV.

[Buy or Lease Land] The land on the early platform will also be sold on various platforms as NFT, and the land can be purchased directly by using Dream. In the later stage, as the land is sold out, DV will become the currency of land lease.

[Internal Circulation] The platform will launch some concerts, exhibitions,

playgrounds and other functions. DV will be used as the currency for purchasing tickets to be circulated internally.

[DV Mining] DV, as a platform token, will be used for ecological incentives and other aspects, and will be shared with holders through the mining mechanism. The currently planned mining includes:

- (1) For mobile mining, LP will be given mining rewards on the decentralized platform.
- (2) Active mining, active in metaverse platform can get DV mining reward.
- (3) Consumption mining, consumption in metaverse platform has the opportunity to get DV mining reward.

[DAO Governance] holds DV to participate in Token allocation and governance decisions of platform rules, including functional research and development schedule, whether internal public facilities are charged and charged, NFT trading rules, etc.
